

Confirmed again: Powhumus® more efficient than competing products

Since 20 years, plant growth enhancer and soil conditioner Powhumus® is one of Humintech's most successful exports. Its efficiency has been confirmed in several trials and by testimonials from customers all across the globe – in all soils and highly diverse climate conditions.

In a recent trial, the reliability of Powhumus® has been proven yet again – and it became clear that similar competing products are only able to keep up to a very limited extent.

For the experiment, Dr. Yasser Dergham has been growing three tomato plants under equal conditions in the greenhouse. Each plant was given 3 g Powhumus® (1g/L Water) daily. The plant pictured left was additionally fed with with 15 milliliters of a market-leading growth enhancer daily, the plant on the right with 3 g Powhumus® (1g/L Water) . The middle plant served as a control.

After three weeks, the results are more than obvious: The Powhumus®-treated plant has built up three times more root mass than the untreated control plant, whereas the competing product could only enhance root growth by a slight percentage.
